

Dr. Michael Chrysostomou

Gynaecologist and obstetrician, Dr. Michalis Chrysostomou, is originally from Paphos and studied at the University of Goettingen in Germany.

The doctor continued his studies in Athens in obstetrics gynaecology specialising in male and female infertility. Later in London, he specialised in female infertility, IVF and endoscopic surgery at a private medical centre in Harley Street and the IVF unit of Kings College Hospital.

For the last 18 years he has been working in the private hospital of Evangelismos in Paphos and at the IASO reproductive medicine unit, IVF at Limassol.

Recently he was trained in cosmetic gynaecology and he often participates in anti-aging conferences.

"Sometimes it's the small changes
that make all the difference"

Revitalise your life!!!

With reconstructive and aesthetic surgery, scientific solutions are offered to women who face chronic deformity and functional problems in the sensitive area. This is an issue that most women have learned to live with, or hide the problem, which impacts their daily lives.

The pathologies of deformity, hypertrophy, asymmetry, poor function and relaxation of the tissues of the sensitive area, appear more and more frequently. Most women have just learned to live with it and hide the problem, and therefore, that impacts their daily lives. Some have reduced femininity and confidence, others have aversion to sex and others sometimes are embarrassed when wearing tight clothes or swimwear. With modern medicine, the sensitive area can be restored and there will be aesthetic and functional improvement of the quality of life for every woman.

The gynaecologist, Dr. Michael Chrysostomou
has revolutionised Cyprus in the
field of cosmetic gynaecology and offers us
cutting edge scientific painless solutions.

REDISCOVER YOURSELF,
INCREASE YOUR CONFIDENCE
AND YOUR LIBIDO
WITH THE INNOVATIVE
METHODS OF
COSMETIC
GYNAECOLOGY

PLASTIC SURGERY FOR THE VULVA

This is aesthetic surgery, which enables the aesthetic restoration of tissue deformities in the area of the female external genital organ.

BRAZILIAN PLASTIC SURGERY

This is surgery, which combines the reducing of the labia minora of the vulva with simultaneous whitening and removal the dark color and with a slight augmentation of the labia majora.

PLASTIC SURGERY OF THE VULVA LABIA

This includes reduction of the labia minora and lifting of the labia majora. Specifically, the plastic regeneration of the labia minora aims to restore malformations involving labia minora, in order to correct the shape or the reduction of the hypertrophic size of the labia minora. Plastic reconstruction of the labia majora aims to reduce the volume of the labia majora, the removal of excess fat and the lifting of the loose skin of the vulva labia majora.

AUGMENTATION OF THE LABIA MAJORA

The volume of the labia majora is augmented and their hypotrophic appearance is restored by transferring either natural fat or hyaluronic acid liquid.

PLASTIC SURGERY FOR THE VAGINA

This painless procedure restores the firmness which assists in a good sexual life. It corrects vaginal relaxation caused by vaginal deliveries. The regeneration of the vagina is a delicate operation, aiming at tightening and reducing the diameter of the vaginal canal.

In addition, vaginal atrophy generated after menopause, which reduces women's sexual pleasure, and urinary incontinence caused by coughing and sneezing can be improved by the technique using a new generation laser. The vagina will be rejuvenated by laser, due to which it regain its original diameter and function.

The vagina is narrowed and is supported again by the muscles which tighten during intercourse and maximize enjoyment.

PLASTIC SURGERY FOR THE CLITORIS

The excess skin on the sides of the clitoris can be successfully treated with a brief surgery and rapid return to daily activities.

WHITENING OF VULVA AND ANUS

This aims at the permanent removal of the dark color in the area of the labia or even of the perineum. The surgery is performed using a specific latest generation Laser, which removes the layer of melamine.
